

GS-30 TRIPLE FOAM TIMER 24 VOLT AC

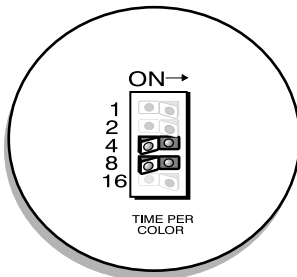

GinSan part number - 77133

FUNCTION

The GS - 30 timer requires 24 VAC for operation. The GS - 30 has three outputs which it continually cycles on one at a time. Example: 1, 2, 3...1, 2, 3...etc. The amount of time the outputs are on is adjustable.(see below) Individual outputs cannot be adjusted to have different values of time.

SETTING THE TIME PER COLOR

The amount of time per color is determined by adding together the switches that are in the "on" position. If the total amount of time per color is 12 seconds, then the eight and four switches will be in the "on" position.

Example: 12 seconds per color = 8 + 4
